Hazard Warning Labels

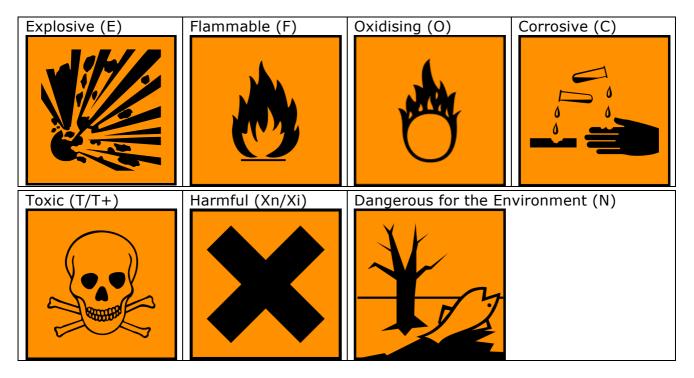

Shown below is a selection of the most commonly used **GHS** (Globally Harmonized System of Classification and Labelling of Chemicals) Hazard Labels used in the BIOLABs to denote potential health, physical and environmental hazards associated with certain materials and equipment and draw attention to the need to take precautions with their use. **GHS** is an internationally agreed upon system, created by the United Nations in 2000, and designed to replace the various classification and labelling standards used in different countries.

Globally Harmonised System (GHS) of Classification and Labelling of Chemicals.

Within the EU (including Ireland), the Classification and Labelling of Chemicals Regulation, which came into force in December 2010, implemented the use of GHS in place of the **EHS** (European Hazard Symbols for Chemicals) labels. The older, orange **EHS** labels (see below) may still be found on some materials, but these are being phased out at present.

European Hazard Symbols for Chemicals (pre 2011)

Students should be familiar with these Hazard Symbols, as well as the internationally used, yellow and black General Safety/Hazard Warning Signs (below).

General Safety/Hazard Warning Signs (DIN 4844-1 / ISO 3864)
